AutoCAD has a feature called Extension Manager, which allows developers to extend the capabilities of AutoCAD by adding their own command and menu items. Extension manager is currently the only tool in AutoCAD that allows users to perform macros and custom AutoCAD functions. However, developers are able to extend AutoCAD by creating custom scripts or Visual LISP code. Most 3D and rendering operations are driven by the Runtime Services (RUNTIME), which manage the execution of 3D and rendering commands, as well as applications (i.e. crosshairs, dimensioning, rendering, 3D camera, etc.) The Runtime Services are part of the AutoCAD program and are a general-purpose, software-based engine. As such, they handle almost all AutoCAD features, including: 3D and rendering, CAD applications, databases, model development, 3D visualization, drawing creation, drafting, management, measurement, architecture, mechanical design, geotechnical design, and so on. Runtime Services are found in every version of AutoCAD.
