What's New in the Adobe Photoshop EXpress?

Q: Why is the "Auto-imported" behavior different on different computers? The example below is the code I wrote to try and simplify displaying a list of files with their sizes, modified and created dates in descending order (so you can see the latest changes of the files). I wanted to use the tag as the can display the file names, sizes, etc. within the . When I ran the program from my MacBook Pro, it displayed the expected results, but when I run the same program from another computer (an HP Pavilion G6 laptop) the tag is not rendered. What's causing this and how can I make the program run on both computers? Any help is greatly appreciated. index.xhtml: fileDisplay
